

# Superior Mulch

## Easy application

Colored mulch should be applied at a depth of 2 to 4 inches and should slope away from buildings for proper water runoff.

Ideally, colored mulch should be installed on a day when there's no rain in the forecast for at least 24 hours. Use less mulch for heavy clay soils, more for lighter sandy soils.

## Easy maintenance

Every four to six months, raking the mulch rejuvenates the bed and provides aeration for plants. A couple of inches of fresh mulch should be applied annually to brighten your landscape for the coming season.

## Information

- Colored mulch can be applied around plants and trees to help prevent weed growth and retain moisture.
- Colored mulch will typically maintain its color for one to two seasons, depending on the amount of direct sunlight.
- During the drying process, the colorant bonds completely with the mulch so it won't wash off or leach out.
- Mulch might still be damp upon purchase and might not dry completely until spread.
- Use a tarp when unloading to protect concrete from damp mulch and do not apply mulch when it is raining.

## How many square feet does a cubic yard of mulch cover?

Depth of mulch	Square feet covered
1"	324
2"	162
3"	108
4"	81
5"	54
